1 A question worth following

[Return: R5](#)

A PDF should let you follow a useful detour and return without losing your place. See the [design rationale](#)^{R1}, then continue with this sentence. A second mention of the [same rationale](#)^{R2} needs its own return address.

- A list can link to the [implementation sketch](#)^{R3}.
- A [reference-style link](#)^{R4} resolves through the same graph.

```
# [This is code, not a document link](#rationale)
```

2 Design rationale

[Return: R1 · R2 · R4 · R6 · R7 · R8 · R9 · R10 · R11 · R12 · R13 · R14 · R15 · R16 · R17 · R18 · R19 · R20 · R21 · R22 · R23](#)

This heading receives repeated visits. The return strip should stay quiet, readable, and beside the place where the reader arrives.

An inline target illustrates a different target type.

A block destination inside a fenced Div.

3 Implementation sketch

[Return: R3](#)

Collect destinations, collect visits, and then insert return strips. The [first question](#)^{R5} is worth revisiting.
